**14.02-1S**24/01/2020  
VC160**Catchment planning and management****Objective**

To assist the protection and restoration of catchments, water bodies, groundwater, and the marine environment.

**Strategies**

Ensure the continued availability of clean, high-quality drinking water by protecting water catchments and water supply facilities.

Consider the impacts of catchment management on downstream water quality and freshwater, coastal and marine environments.

Retain natural drainage corridors with vegetated buffer zones at least 30 metres wide along each side of a waterway to:

- Maintain the natural drainage function, stream habitat and wildlife corridors and landscape values,
- Minimise erosion of stream banks and verges, and
- Reduce polluted surface runoff from adjacent land uses.

Undertake measures to minimise the quantity and retard the flow of stormwater from developed areas.

Require appropriate measures to filter sediment and wastes from stormwater prior to its discharge into waterways, including the preservation of floodplain or other land for wetlands and retention basins.

Ensure that development at or near waterways provide for the protection and enhancement of the environmental qualities of waterways and their instream uses.

Ensure land use and development minimises nutrient contributions to water bodies and the potential for the development of algal blooms.

Require appropriate measures to restrict sediment discharges from construction sites.

Ensure planning is coordinated with the activities of catchment management authorities.

**Policy guidelines**

Consider as relevant:

- Any regional catchment strategy and related plans approved under the *Catchment and Land Protection Act 1994*.
- Any applicable implementation strategy approved by a catchment management authority or waterway management authority.
- Any special area or management plan under the *Heritage Rivers Act 1992*.
- Any action statement or management plan prepared under the *Flora and Fauna Guarantee Act 1988*.

**Policy documents**

Consider as relevant:

- *State Environment Protection Policy (Waters of Victoria)*
- *Murray River Regional Environmental Plan No 2 (REP2) of New South Wales*

## BAW BAW PLANNING SCHEME

- *Urban Stormwater - Best Practice Environmental Management Guidelines* (Victorian Stormwater Committee, 1999)

14.02-1L Protecting Baw Baw's water catchments

Proposed C139bawb

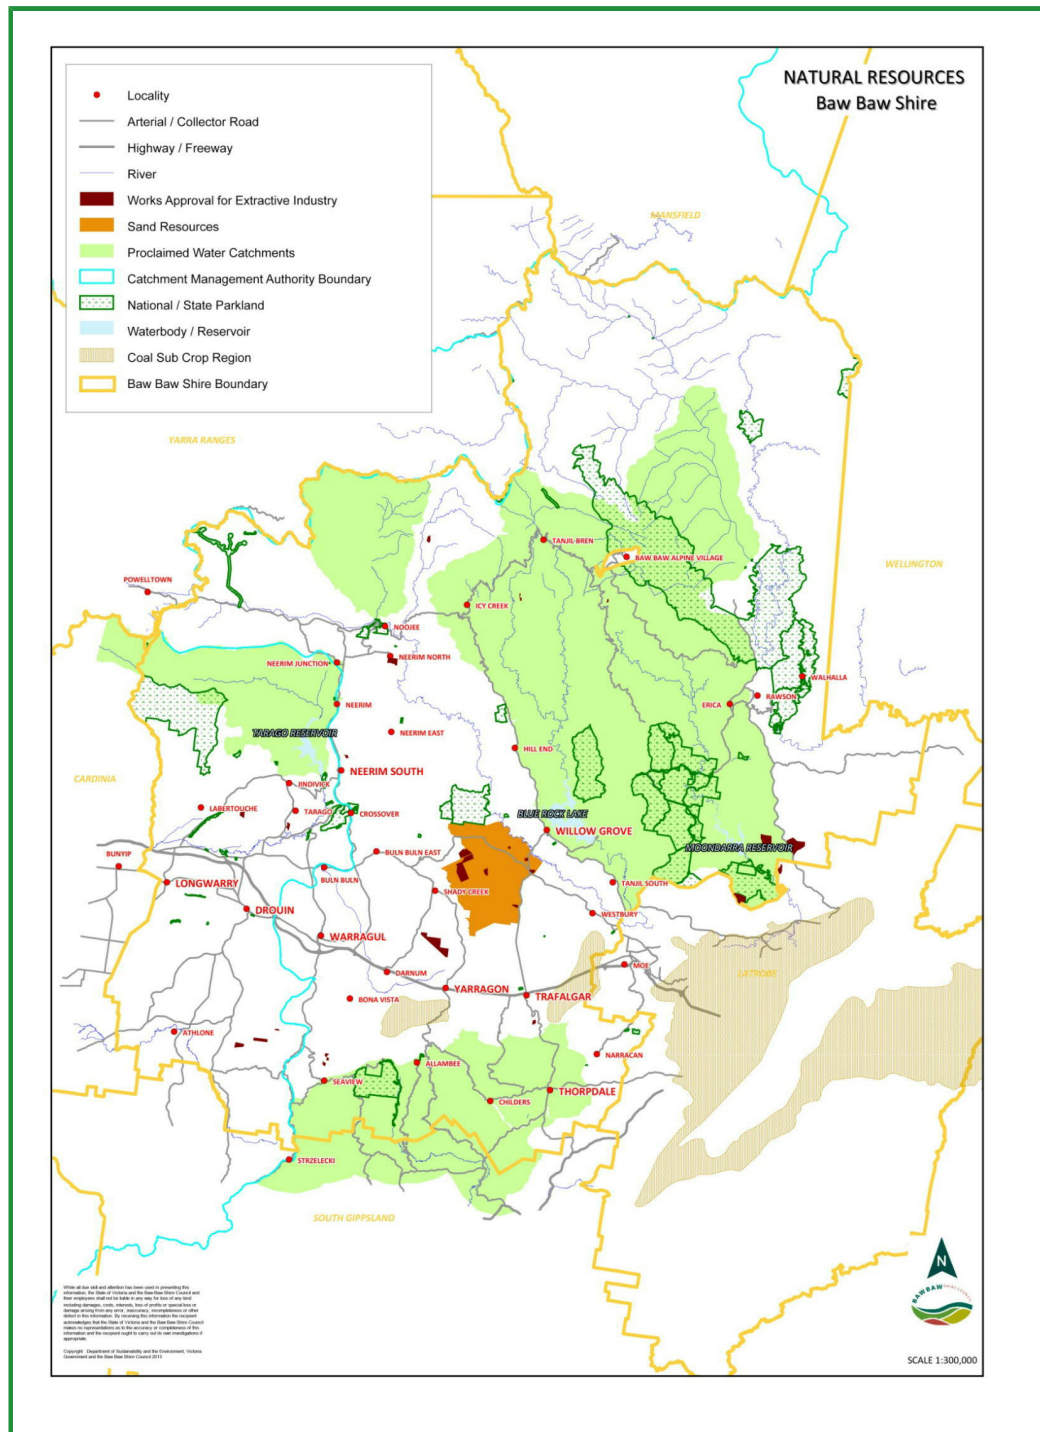

Policy application

This policy applies to all land identified as Proclaimed Water Catchment areas on the Natural Resources Plan to this clause.

Strategies

Protect declared water supply catchments by directing development to settlements where reticulated sewer systems are available.

Natural Resources Plan

**14.02-2S**

VC148

**Water quality**

**Objective**

To protect water quality.

**Strategies**

Protect reservoirs, water mains and local storage facilities from potential contamination.

Ensure that land use activities potentially discharging contaminated runoff or wastes to waterways are sited and managed to minimise such discharges and to protect the quality of surface water and groundwater resources, rivers, streams, wetlands, estuaries and marine environments.

Discourage incompatible land use activities in areas subject to flooding, severe soil degradation, groundwater salinity or geotechnical hazards where the land cannot be sustainably managed to ensure minimum impact on downstream water quality or flow volumes.

Prevent the establishment of incompatible land uses in aquifer recharge or saline discharge areas and in potable water catchments.

Encourage the siting, design, operation and rehabilitation of landfills to reduce impact on groundwater and surface water.

Use the mapped information available from the Department of Environment, Land, Water and Planning to identify the beneficial uses of groundwater resources and have regard to potential impacts on these resources from proposed land use or development.

VC161

**Protection of declared irrigation districts**

**Objective**

To plan and manage for sustainable change within irrigation districts declared under Part 6A of the *Water Act 1989*.

**Strategies**

Identify and plan for the future needs of communities to adapt and adjust to land use change within an irrigation district.

Protect agricultural land serviced by irrigation infrastructure to ensure the future viability of an irrigation district.

Ensure non-agricultural land use does not undermine the integrity of irrigation infrastructure and complements existing and future agricultural production.

Ensure land use change within an irrigation district does not negate the potential opportunities for a rural water corporation to make adjustments to the footprint of an irrigation district that are identified under an approved plan or strategy.

Ensure land use change does not limit the ability of future investment in irrigation infrastructure that achieves the intended benefits of minimising water loss, and improved irrigation service efficiency to the farm gate and overall agricultural production.
